## ‘Coffee during pregnancy safe for baby’s brain growth’

A University of Queensland-led study has failed to find any strong links between drinking coffee during pregnancy and neurodevelopmental difficulties in children, but researchers are advising expectant mothers to continue following medical guidelines on caffeine consumption.

Dr Gunn-Helen Moen and PhD student Shannon D’Urso from UQ’s Institute for Molecular Bioscience (IMB) led an in-depth genetic analysis of data from tens of thousands of families in Norway.

“Scandinavians are some of the biggest coffee consumers in the world, drinking at least 4 cups a day, with little stigma about drinking coffee during pregnancy,” Dr. Moen said.

“Our study used genetic data from mothers, fathers and babies as well as questionnaires about the parents’ coffee consumption before and during pregnancy.

“The participants also answered questions about their child’s development until the age of 8, including their social, motor, and language skills.”

“Our analysis found no link between coffee consumption during pregnancy

and children’s neurodevelopmental difficulties.”

The researchers said physiological changes during pregnancy prevent caffeine breaking down easily and it can cross the placenta and reach the foetus, where there are no enzymes to metabolise it.

Caffeine accumulation was thought to impact the developing foetal brain, but Dr. Moen said previous observational studies couldn’t account for other environmental factors such as alcohol, cigarette smoke or poor diet.

“We used a method called Mendelian randomisation which uses genetic variants that predict coffee drinking behaviour and can separate out the effect of different factors during pregnancy,” she said.

“It mimics a randomised controlled trial without subjecting pregnant mothers and their babies to any ill effects.

“The benefit of this method is the effects of caffeine, alcohol, cigarettes and diet

can be separated in the data, so we can look solely at the impact of caffeine on the pregnancy.”

The researchers use genetic analysis to understand complex traits and diseases especially in early life, with a previous study by Dr. Moen showing that drinking coffee in pregnancy did not affect birth weight, risk of miscarriage or stillbirth.

They emphasise the importance of following advice from healthcare providers to limit caffeine consumption during pregnancy, as caffeine may influence other pregnancy outcomes.

The researchers are now looking to apply similar analyses to understand more about genetic and environmental causes of neurodiversity, and the effect of it from other factors on brain development during pregnancy.

## New drug for treating inherited retinal degenerations

An international team of researchers has identified new drug targets for therapies that could benefit patients with different forms of retinitis pigmentosa and other inherited retinal diseases. Using advanced proteomics techniques, they unveiled shared critical pathways in retinitis pigmentosa disease models. The study represents significant progress in understanding how the proteome may change in different retinal dystrophies.

Retinitis pigmentosa (RP), a group of genetic disorders that cause progressive vision loss, has long been a challenge to treat due to its genetic diversity.

However, the new study led by researchers at UEF suggests that disease-modifying treatments that could benefit patients with all forms of the disease, regardless of the

do not rely on specific genetic mutations, potentially offering hope to millions of patients affected by retinal degenerative diseases,” says Dr Henri Leinonen, the senior author of the study.

underlying mutation, are achievable.

The researchers demonstrated that shared pathological processes occur downstream of the initial rod cell degeneration in distinct forms of RP, opening possibilities for broad-spectrum therapeutic interventions.

This cross-institutional, multi-methodological study provided a comprehensive analysis of retinal proteins, comparing three mouse models of inherited retinal degeneration to healthy wild-type mice.

“Our data facilitate the development of new therapeutic strategies that

“We identified key retinal proteins and pathways that could be targeted to mitigate the progression of retinal degeneration,” continues Dr Ahmed Montaser, the study’s first author and a postdoctoral researcher at the Leinonen Retina Laboratory, University of Eastern Finland, School of Pharmacy.

“Additionally, we are sharing this detailed profile of retinal proteins in both healthy and diseased states with the scientific community to encourage further research and accelerate the development of effective treatments.”

## Tool for first responders: Detecting heart attacks within minutes

With heart attacks, every second counts. A new blood test diagnoses them in minutes rather than hours and could be adapted as a tool for first responders and people at home.

“Heart attacks require immediate medical

intervention in order to improve patient outcomes, but while early diagnosis is critical, it can also be very challenging -- and near impossible outside of a clinical setting. We were able to invent a new technology that can quickly and accurately

establish if someone is having a heart attack,” said lead author Peng Zheng, an assistant research scientist at Johns Hopkins University.

Zheng and senior author Ishan Barman developed diagnostic tools through biophotonics, using laser light to detect biomarkers, which are bodily responses to conditions including disease. Here they used the technology to find the earliest signs in the blood that someone was having a heart attack. Though an estimated 800,000-plus people have heart attacks every year just in the United States, heart attacks remain one of the trickiest conditions to diagnose, with symptoms that vary widely and biological signals that can be subtle and easy to miss in the early stages of an attack, when medical intervention can do the most good.

People suspected of having heart attacks typically are given a combination of tests to confirm the diagnosis -- usually starting with electrocardiograms to measure the electrical activity of the heart, a procedure that takes about five minutes, and blood tests to detect the hallmarks of a heart attack, where lab work can take at least an hour and often has to be repeated.

The stand-alone blood test the team created provides results in five to seven minutes. It’s also more accurate and more affordable than current methods, the researchers say. Though created for speedy diagnostic work in a clinical setting, the test could be adapted as a hand-held tool that first responders could use in the field, or that people might even be able to use themselves at home.

“We’re talking about speed, we’re talking about accuracy, and we’re talking of the ability to perform measurements outside of a hospital,” said Barman, a bioengineer in the Department of Mechanical Engineering.

## New bandage to mitigate infection risk

Without proper medical invention, injuries sustained from traffic collisions, serious workplace accidents or weapons may result in fatal hemorrhaging.

University of Central Florida researchers aim to prevent such bleeding in potentially deadly situations with a new hemostatic spongelike bandage with antimicrobial efficacy that they recently developed and detailed in a newly published study in the journal Biomaterials Science.

“What happens in the field or during an accident is due to heavy bleeding, patients can die,” says Kausik Mukhopadhyay, assistant professor of materials science and engineering at UCF and study co-author. “These fatalities usually occur in the first 30 minutes to one hour. Our whole idea was to develop a very simple solution that could have the hemostatic efficacy within that time. If you can save the patient, then the doctors and the nurses can then save the patient.”

The method Mukhopadhyay and his team developed is called SilFoam as it’s more of a foam than a traditional bandage wrap. SilFoam is a liquid gel comprised of siloxanes (silicon and oxygen) that is delivered via a special two-chamber syringe which rapidly expands into a spongy foam upon exposure to each other within the wound in under one minute. The sponge applies pressure to restrict the hemorrhage at the delivery site while also serving as an antibacterial agent because of the silver oxide in it.

For every five milliliters of gel injected, you can expect an expansion of about 35 milliliters, Mukhopadhyay says. “Anytime you have a profuse bleeding or bleeding, you want to press on top and stop the bleeding,” he says. “So, what we did here is actually the same thing. Instead of putting the hand, we injected it, and it creates a voluminous expansion.”

Mukhopadhyay and his collaborators found that their sponge also resulted in a more gentle removal. “The adhesive property

of this bandage is optimized so that when you take it out from the system, the smaller vessels don’t get ruptured, but it has the right amount of addition that can adhere to the muscles, veins and the arteries so that the blood doesn’t leak,” he says.

The sponge’s porosity and adhesion properties help it expand and seal the wound, allowing the body’s natural clotting process to take over, Mukhopadhyay says.

“During the reaction, it generates a little bit amount of heat that helps the process very fast,” he

says. “On top of that, making it a cross-linkable oxygen gas as part of the reaction’s byproduct, tries to come out. So instead of rubber, it’s a soft sponge with a lot of internal porosity.”

**Kotak Mahindra Bank Limited** ONLINE E - AUCTION SALE OF ASSET

Registered Office: 27BKC, C-27, G-Block, Bandra Kurla Complex, Bandra (E), Mumbai - 400051 Branch Office: Kotak Mahindra Bank Ltd, NO.185, 2nd Floor, Anna Salai, Mount Road, Chennai 600 006. (Land Mark: MG Car Showroom and Next to Thousand Lights Metro Station)

**Sale Notice For Sale Of Immovable Properties**

E-auction sale notice for sale of immovable assets under the securitisation and reconstruction of financial assets and enforcement of security interest act, 2002 under rules 8(5) and 8(6) of the security interest (enforcement) rule, 2002. Subsequent to the assignment of debt in favour of Kotak Mahindra Bank Limited by "PNB Housing Finance Limited" (hereinafter referred to as "PNBHFL") the Authorised Officer of Kotak Mahindra Bank Limited (hereinafter referred to as "The Bank/ KMBL/Secured Creditor") has taken the possession of below described immovable property (hereinafter called the secured asset) mortgaged/charged to the secured creditor on 13.09.2024. Notice is hereby given to the borrower (s) and co-borrower (s) in particular and public in general that the bank has decided to sale the secured asset through e-auction under the provisions of the Sarfesi Act, 2002 on "as is where is", "as is what is", and "whatever there is" basis for recovery of Rs. 49,64,785/- (Rupees Forty Nine Lakh Eighty One Thousand Nine Hundred and Eighty Five Only) outstanding as on 17.10.2024 along with future applicable interest till realization, under the loan account no. HOU/OMR/0717/408838; loan availed by Mrs. Nirmala S & Mr. Subramanian S as per below details.

Particular	Detail
Date of Auction	28.11.2024
Time of Auction	Between 12:00 Pm to 1:00 Pm With Unlimited Extension Of 5 Minutes
Reserve Price	Rs.31,00,000/- (Rupees Thirty One Lakh Only)
Earnest Money Deposit (EMD)	Rs.3,10,000/- (Rupees Three Lakh Ten Thousand Only)
Last Date For Submission Of End With Key	27.11.2024 UP TO 6:00 P.M. (IST)
Description Of The Secured Asset	All that piece and parcel of Plot bearing No.H2-B, Sri Balaji Nagar, Sikkarayapuram Village, Sripurumbudhur Taluk, Kancheepuram District comprised in S.No.115 Part, Patta No.291 as per Patta New S.No.115/1 measuring an extent 975 sq. Ft. Vide Planning Permit No.370/2008, D.Dis.No.5101/2007/A3 dated 03.04.2008 and the land bounded on the North by: 20 feet road, South by: vacant land, East by: Plot No.H3, West by: Plot No.H2A, Measuring: East to West on the Northern Side: 42 feet, East to West on the Southern Side: 43 feet, North to South on the Eastern Side: 19 feet, North to South on the Western Side: 27.1 feet, situated within the Sub-Registration District of Kundrathur and Registration District of Chennai-South.
Known Encumbrances	NIL

The borrowers' attention is invited to the provisions of sub section 8 of section 13, of the act, in respect of the time available, to redeem the secured asset. Borrowers in particular and public in general may please take notice that if in case auction scheduled herein fails for any reason whatsoever then secured creditor may enforce security interest by way of sale through private treaty. In case of any clarification/requirement regarding assets under sale, bidder may contact Mr. Syam Namburi (Mob No. +919677288418), Mr. Vishal Adishesan (+919941016000) & Mr. Praveen Raj, S (+918438999437). Bidder may also contact the bank's IVR no. (+91-9152219751) for clarifications. For detailed terms and conditions of the sale, please refer to the link <https://www.kotak.com/en/bank-auctions.html> provided in the bank's website i.e. <http://bank.auctions.in/>
